Action Item # 08

Presentation Section/Subject Area: Command & Control System Definition

SPECIFIC REQUEST:

The ISOC does not yet know what system it is using to process Observatory Housekeeping Data or perform the commanding. Particularly since this is probably the only true launch critical function in the ISOC, it does not seem possible to proceed to ISOC CDR without this being well defined. This is especially true if the system is going to be developed in-house, since the detailed design, implementation schedule, etc. of the T&C system itself would need to be part of the CDR. Need to get this defined ASAP and ensure enough time is allocated between when the choice is made and when the ISOC CDR is held.
